DS-Taker light

net price gross price

The DS-Taker Light was designed especially for authors and writers. Rough translation (Word Doc / RTF), or rather importing the original script, afterwards loading the Quicktime video and here we go: Translating take for take, troublesome positioning occurs now automatically, and loops are possible to ensure that different text versions can be repeated lip-sync. A script is generated, that can directly be used for precise taking and scheduling. Only restriction is the timecode processing, which can be saved in a two seconds raster in the EDL. Delivery contents: Dongle, Software (CD) and user manual.

DS-Taker EDL

net price gross price

The DS-Taker EDL is especially suitable for cutter. Taking of a script in a classical way with pencil and ruler, but now by the help of a Quicktime picture. After loading the video material and importing a project, the production can be taken with the DS-Taker EDL. When production logging is completed, the take file can be forwarded online or via disk. Supports DS-ADR, FED-ADR, EDICOM II, RTF, Excel and CSV format. Delivery contents: Dongle, Software (CD) and user manual.

DS-ADR

net price gross price

The DS-ADR is an Automated Dialogue Replacement system and provides the user with comprehensive, computer assisted support in all phases of the post production process. Besides the classical functions (8-128 track display for dialogue, Loop / Record controlling, track selection, TC In / TC Out / modifications, actor administration etc ...) the system also provides full access to the dubbing text and the original script. The text of the actual take is automatically displayed in the Studio, whereby a paperless studio workflow is possible. The network interface optimizes the workflow: Import of the daily original script, spontaneous casting records, fee accounting (Take by Take or with a build-in Word count algorithm).

9.500,00 € 11.305,00 €

The FPGA based DVI inserter (HD format 1920/1080) switches the picture in the preroll either black or transparent and shows the countdown (Attention-1-2-3) or a wipe. In addition the actual take including the episode number, the timecode and the duration based display of the actual take (dynamical position display) are displayed. The display of up to four markers (as a flash sign or a wipe) enables a perfect dubbing in the 'off-on' dialog for the actors. The DVI inserter enables the usage of cheap consumer TFT displays in studios with its HDMI interface.

Delivery contents: DS-ADR (19", 2RU interface), studio control panel, dongle, software (CD) and user manual. Not included in the delivery contents is the Windows XP computer.

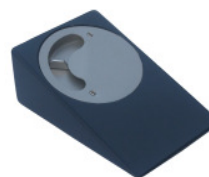

DS-Control

net price gross price

A Steenbeck® motion controller enables the precise controlling of the DS-Taker picture. The DS-Control exists of a motion controller, a Windows XP install software and is connected via USB 2.0 interface.

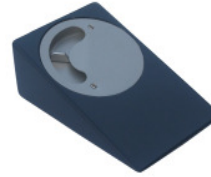

850,00 € 1.011,50 €

DS-Control IF	net price	gross price
---------------	-----------	-------------

Customers, who already have a Steenbeck® motion controller, can purchase the DS-Control alternatively as DS-Control IF. The precise controlling of the DS-Take is ensured together with a provided motion controller. The DS-Control IF exists of a Windows XP install software and is connected via USB 2.0 interface.

DS-Wipe	net price	gross price
---------	-----------	-------------

The DS-Wipe is a TC / feet (frame) display for mixing stages, controlled by a Soundmaster ION ATOM. Based on a PC the system is running with the rock-solid Linux real-time program. The TC or rather feet/frame display occurs through a DVI or S-VGA interface and is controlled serial from a Soundmaster system (for example video beamer or TFT / Plasma display). Up to four wipes can be displayed simultaneously. The wipe start, controlled by the Soundmaster, is triggered by the EDL list. All parameters are scalable (size / colour / font). Delivery contents: DS-Wipe (19", 1RU machine) and user manual.

Options	net price	gross price
---------	-----------	-------------

ADR Option 6 , ProTools HD option for FED ADR	3.000,00 €	3.570,00 €
--	------------	------------

The enhancement **ADR Option 6** enables the serial controlling from ProTools as Master, controlling of the track selection and the Rec ON/OFF commands without additional interfaces direct via RS-422 – Sony P2® protocol (Protools requirements: minimum PT HD 1 system, Keyspan IF [USB-RS422 converter], Sync IO and machine control software). Delivery contents: Software, RS-232/422 adapter and dongle.

EDI Option 9 , ProTools HD option for EDICOM II	3.000,00 €	3.570,00 €
--	------------	------------

The enhancement **EDI Option 9** enables the serial controlling from ProTools as Master, controlling of the track selection and the Rec ON/OFF commands without additional interfaces direct via RS-422 – Sony P2® protocol (Protools requirements: minimum PT HD 1 system, Keyspan IF [USB-RS422 converter], Sync IO and machine control software). Delivery contents: Software and dongle (PAL IC has to be installed inside the EDICOM II mainframe).

ADR Option 7 , FEG remote software for the controlling of Nuendo via FED-ADR	2.500,00 €	2.975,00 €
---	------------	------------

The enhancement **ADR Option 7** enables the serial controlling of Nuendo, controlling of the track selection, transfer of take names inclusive episode / production name and the Rec ON/OFF times without additional interfaces direct via RS-422 – FEG protocol. Delivery contents: Software, RS-232/422 adapter and dongle.

EDI Option 2 , VTR Sony P2 Option	1.200,00 €	1.428,00 €
--	------------	------------

A Sony P2® protocol able video machine can be controlled via the COM1 (VTR-A) and COM2 (VTR-B) interfaces.
